

WE CARE 2020

how to make a *Let it Snow* Globe

Instructions

1. Place the snow globe materials on a flat work surface.
2. Unscrew the cap of your snow globe and carefully remove the inner stopper with the ornament attached.
3. Hold the globe and carefully pour in approximately 1¾ cups of water (distilled water is recommended).
4. Open the 2 plastic packets with glycerin and glitter and pour the contents into your jar.
5. You may choose to add more water, but don't fill your globe too much. The figurine requires space and you want an air pocket to allow for the shaking.
6. Insert the stopper with the attached holiday figurine. Press and seal carefully.
7. Screw the cap on tightly and tie on the decorative ribbon.
8. Shake it up and smile! *Enjoy your snow globe!*

Merry Christmas!
